

Five steps to using Polyvis

Step 1: In the Columns dropdown select values to display from the Search Metric, Tracked Metric or Decision Variable lists as desired

Polyvis

Columns

7 selected

Colour

None

Line Labels

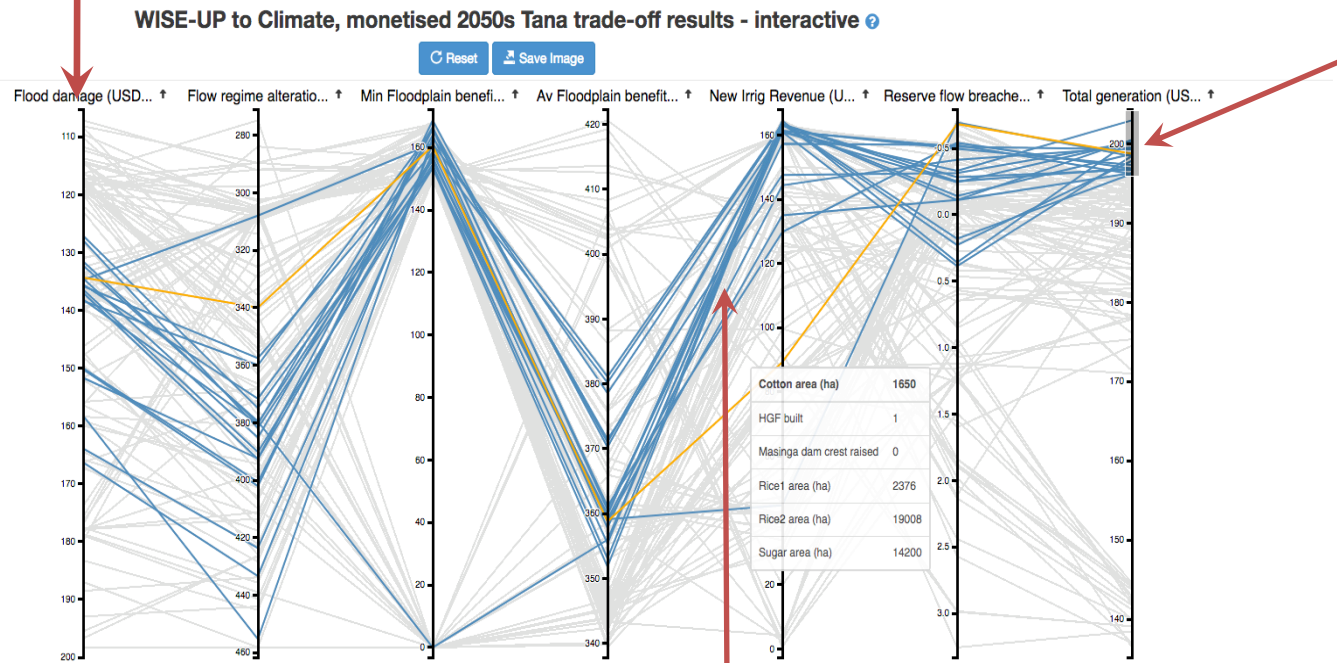

6 selected

Options

- Show Labels
- Show Headings

Step 5: Click and drag an axis header left or right to reorder axes

Step 3: Click and drag cursor along an axis to draw a box which filters the options. Click and drag the box to relocate or click and drag its extremities to resize. A single click elsewhere on the axis clears the filter box.

Step 2: Select from the 'Colour' dropdown if you'd like lines coloured according to a value. In the Line Labels dropdown select which values you'd like shown when you hover cursor over a results line.

Step 4: Hover cursor over one of the option lines to highlight it orange and display any selected *Line Labels* information in a pop-up. The selected option(s) will be highlighted orange in the data table below the plot - scroll down to see the full results or hold down 'shift' key and mouse click the option line(s) to isolate data in the table
